

SHAIKH ZAYYAN AZHAR

AI Engineer | Full Stack Developer

zayyan123shaikh@gmail.com | +91 7972751248 | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

AI Engineer and full stack developer who ships complete AI products, not prototypes — geospatial decision-intelligence platforms, computer vision pipelines, and LLM-powered healthcare assistants, each taken from architecture through deployment. Builds on React, Node.js/Express, and PostgreSQL/MongoDB, with Docker-first infrastructure and a consistent focus on explainable, production-ready AI over black-box demos.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

AI / Machine Learning: Machine Learning, Computer Vision, Large Language Models (LLMs)

Full Stack: React.js, Node.js, Express.js

Databases & Tools: PostgreSQL, MongoDB, Docker

FEATURED PROJECTS

GreenBore AI — AI-powered borewell site recommendation platform

- **Architected** a modular, Docker-first platform that combines geospatial analysis with computer vision to recommend viable borewell drilling locations, targeting water accessibility challenges.
- **Designed** an explainable decision-intelligence engine that surfaces the reasoning behind each site recommendation instead of a black-box score, improving user trust in the output.
- **Built** a React frontend for interactive geospatial visualization, letting users explore recommended sites and the underlying data layers.
- **Engineered** a scalable, modular backend architecture supporting geospatial queries and independent AI service components.
- **Developed** computer vision components for terrain and land-surface analysis, feeding structured features into the recommendation engine.

Technologies: React, Node.js, Express.js, Python, Computer Vision, Docker, PostgreSQL

DermAI — AI-powered skin disease analysis and health platform

- **Designed** a streamlined image-upload workflow that guides users from photo submission to AI-generated results in a few simple steps.
- **Developed** an AI image-analysis pipeline that predicts likely skin conditions from user-uploaded photos.
- **Built** a disease knowledge base covering condition details and contagious status, helping users make informed care decisions.
- **Implemented** Razorpay-based subscription billing to gate premium features within a healthcare-focused workflow.
- **Created** community forums so users can discuss conditions and share experiences alongside AI-driven insights.

Technologies: React, Node.js, Express.js, Machine Learning, Computer Vision, MongoDB, Razorpay API

RoboDoc AI — AI-powered personalized healthcare assistant

- **Engineered** a multi-mode health guidance system spanning Ayurvedic, Allopathic, and Homeopathic recommendation paths from a single symptom input.
- **Built** an AI symptom-analysis engine paired with an AI nutritionist and AI chef to generate personalized dietary guidance.

- **Created** a dedicated exercise planner that complements diet recommendations for a complete, personalized wellness plan.
- **Integrated** a credit-based usage system with Razorpay payments to meter access to premium AI features.
- **Designed** consolidated health summaries so users can track guidance and recommendations across sessions.

Technologies: React, Node.js, Express.js, LLMs, Prompt Engineering, PostgreSQL, Razorpay API

EDUCATION

B.Tech — PES College of Engineering, Aurangabad

Expected Graduation: 2027

CERTIFICATIONS

Certificate of Completion — Robotic Process Automation (RPA) Bootcamp [\[View Certificate\]](#)

CORE STRENGTHS

End-to-End AI Product Development • Geospatial & Computer Vision Systems • LLM-Powered Application Design • Docker-First, Scalable Architecture • Explainable, Decision-Focused AI

INTERESTS

Artificial Intelligence • Computer Vision • Full Stack Development • Healthcare AI • Environmental Intelligence
